A naturally curious developer with a passion for solving problems and diving deep into technical challenges. From unraveling the intricacies of cloud infrastructure to experimenting with web tools or tinkering with game development, I find joy in pushing the boundaries of technology and transforming curiosity into impactful solutions.

Work Experience

Freelance Developer

Jun 2023 - Present

- Freelance full-stack developer with experience delivering a variety of short- and medium-term projects across diverse industries, including e-commerce, online education, and wellness.
- Developed SSR applications using **Next.js** and **Nuxt.js** for performance-optimized web solutions, and built backend systems with **Laravel**, integrating databases like **Firebase**, **Supabase**, and **PostgreSQL**.
- Worked with clients to build applications such as a Zoom-based yoga class platform and several e-commerce solutions.

Frontend Developer

Mar 2020 - Sep 2022 - *extenship.com, Turkey, Onsite*

- Sole frontend developer for **EasyInventory**, an advanced inventory management application integrated with Amazon Seller Partner API, offering superior features and usability compared to Amazon's Seller Central.
- Played a key role in enabling seamless integration for 1,800+ Amazon sellers across **14 different Amazon regions**, processing **40 million product transactions daily**.
- Designed and developed a Vue.js-based application with embedded React-powered modules for warehouse and cargo management via iframes.
- Built and maintained a **custom UI kit** using SCSS, ensuring a cohesive and reusable design system tailored to project needs.
- Collaborated with a cross-functional team, employing **Clickup** and **Scrum/Agile** methodologies to efficiently plan and deliver features.
- Delivered additional frontend applications for specific use cases using **Vue.js** and **Angular**, providing tailored solutions for small to medium-scale requirements.

- Developed and maintained **back-office tools** and **microservices** using **Fastify**, **Molecular.js**, and **PostgreSQL** to support internal operations and external staff needs.
- Implemented advanced **repricer functionalities**, allowing users to dynamically adjust pricing based on category, sales region, and additional costs like shipping and customs.
- Designed custom filtering and rule-setting mechanisms, allowing users to automate repetitive tasks and focus on scaling their e-commerce operations.

Education

Associate Degree: Computer Programming

Celal Bayar University - Manisa TR
